

## Solenoid directional valves type DPHI, DPHE, DPHER

two stage, ISO 4401 size 10, 16, 25 and 32

DPHI, DPHE and DPHER are spool ① type, two or three position, two stage directional solenoid valves.

They are operated by a direct solenoid pilot valve ② available in three different executions:

- DHI suitable for AC and DC supply with **cURus** certified solenoids, see tech. table E010

- DHE suitable for AC and DC supply, high performances, see tech. table E015

- DHER as DHE but with **cURus** certified solenoids, see tech. table E015

Shell-moulding castings ③ machined by transfer lines and then cleaned by thermal deburring. Optimized flow paths largely cored with extrawide channels to tank for low pressure drops.

The valves can be supplied with optional devices, as adjustable chokes for control of switching times ④, see section ④ for available options. Coils are easily re-placeable without aid of tools.

**Surface mounting: ISO 4401, size 10, 16, 25 and 32**

**Max flow up to 160, 300, 700, 1000 l/min.**

**Pressure up to 350 bar**

1) For configuration 70 and 75, times of switching ON and switching OFF are the same: this value is equal to time of switch ON of configuration 63.

2) TEST CONDITIONS

- Nominal voltage supply DC (direct) and AC (alternating) with connector type SP-666. The use of other connectors can affect the switching time;
- 2 bar of counter pressure on port T;
- mineral oil: ISO VG 46 at 50°C

3) The response time is affected by elasticity of the hydraulic circuit, by variation of hydraulic characteristics and temperature.

**10 PILOT PRESSURE GENERATOR (OPTION /R)**

The device **/R** generates an additional pressure drop, in order to ensure the minimum pilot pressure, for correct operation of the valves with internal pilot and fitted with spools type **0, 0/1, 4, 4/8, 5, 58, 09, 90, 94, 49**. The device **/R** has to be fitted when the pressure drop in the valve, verified on flow versus pressure diagrams, is lower than the minimum pilot pressure value.

## 11 ORIFICE LOCATION FOR PILOT/DRAIN CHANNELS

Depending on the position of internal plugs, different pilot/drain configurations can be obtained as shown below. To modify the pilot/drain configuration, proper plugs must only be interchanged. The plugs have to be sealed using loctite 270. Standard valves configuration provides internal pilot and external drain.
